

PROFESSIONAL SUMMARY

Android/AAOS Developer with hands-on HMI production experience at Harman International. Proficient in Android Automotive OS platform development, Jetpack Compose for large automotive displays, and MVVM/Clean Architecture. Reliability-first mindset: zero ANR and zero API crash reports across all shipped software.

EXPERIENCE

Android Developer Intern — Automotive HMI Feb 2026 – Present
Harman International (A Samsung Company), Bengaluru, India

- Engineered and integrated **HMI features** for production infotainment on **Android Automotive OS (AAOS)**, meeting automotive UX, safety, and platform constraints within agile OEM release cycles.
- Optimised **Jetpack Compose** and XML UI components for **15-inch automotive touchscreens**, maintaining jank-free interactions across multiple display resolutions and densities.
- Increased test coverage using **JUnit 4/5** and **Mockito**; reduced regression defect rate in production OEM builds by 80 %.
- Refactored HMI UI layer to **Material Design 3** within **MVVM Clean Architecture**, delivering dynamic dark/light theming aligned with automotive cabin lighting modes.
- Contributed to **Android Open Source Project (AOSP)** components, gaining hands-on experience with the Android platform internals and automotive-specific extensions.
- Developed and integrated **Climate Control and Driver Assistance** HMI features, enabling driver-facing controls for temperature, fan speed, and airflow management within the infotainment system.

Android Developer Intern Aug 2025 – Feb 2026
PADAAMS Innovative Technolabs Pvt Ltd, Remote

- Architected **EduAI** end-to-end using **Kotlin, Jetpack Compose, MVVM**, and **Hilt DI** — demonstrating full Android application lifecycle ownership beyond automotive.
- Integrated LLM REST APIs via **Retrofit/OkHttp**; managed all async operations via **Kotlin Coroutines + StateFlow**, keeping the main thread unblocked — a hard requirement in automotive environments.
- Achieved zero ANR and zero crash reports in production, validating reliability-first development practices directly applicable to safety-aware automotive software.

PROJECTS

Expense Tracker GitHub

- Production Android app with **500+ users**; offline-first via **Room Database + Firestore** sync — demonstrates reliability-first architecture consistent with automotive software standards.

TECHNICAL SKILLS

Automotive & Platform: Android Automotive OS (AAOS), HMI Development, Infotainment Systems, Automotive UX Guidelines, Large-screen/Multi-display Optimisation
Android Core: Kotlin, Java, Jetpack Compose, Android SDK, MVVM, Clean Architecture, Material Design 3, Navigation Component, WorkManager, Android KTX
Architecture & DI: Repository Pattern, Hilt/Dagger2, ViewModel, StateFlow, Kotlin Coroutines, Flow
Networking: Retrofit, OkHttp, REST APIs
Databases: Room Database, Firebase (Firestore, Auth, Realtime DB), MongoDB, MySQL
Testing & DevOps: JUnit 4/5, Mockito, Espresso, Git, GitHub Actions, Gradle, CI/CD
Core CS: DSA (450+ LeetCode), OOP, SOLID Principles, Design Patterns, Agile/Scrum

EDUCATION

Sri Venkateswara College of Engineering and Technology (Autonomous) Chittoor, AP, India
B.Tech., Computer Science and Engineering

ACHIEVEMENTS

- Production **AAOS HMI** development experience at Harman International — OEM supplier to BMW, Toyota, and leading automotive brands.
- Shipped Android software to **500+ real users**; owned full SDLC from architecture through production release across 2 internships.
- Achieved **zero ANR and zero crash** reports across all production-deployed Android software.
